

Problem Statement: Social Media Agent

The Challenge:

Managing social media across multiple platforms is challenging for brands, businesses, influencers, and organizations. Creating engaging content consistently, tracking audience sentiment, analyzing competitors, identifying trending topics, and responding to users in real time require significant effort and expertise. Existing tools are often fragmented, making it difficult to gain actionable insights and improve overall social media performance.

The Objective:

Build an AI-powered Social Media Agent using IBM Bob and IBM Granite models that helps users create, analyze, and optimize social media content. The solution should:

- Generate platform-specific content for Instagram, LinkedIn, X, Facebook, and YouTube.
- Suggest relevant hashtags and trending topics.
- Analyse audience sentiment and engagement.
- Monitor competitor strategies and market trends.
- Recommend the best posting time and content improvements.
- Provide AI-powered marketing insights through a multi-agent system.
